01 / UNDERSTAND · COMMERCIAL AVIATION

From demand to departure.

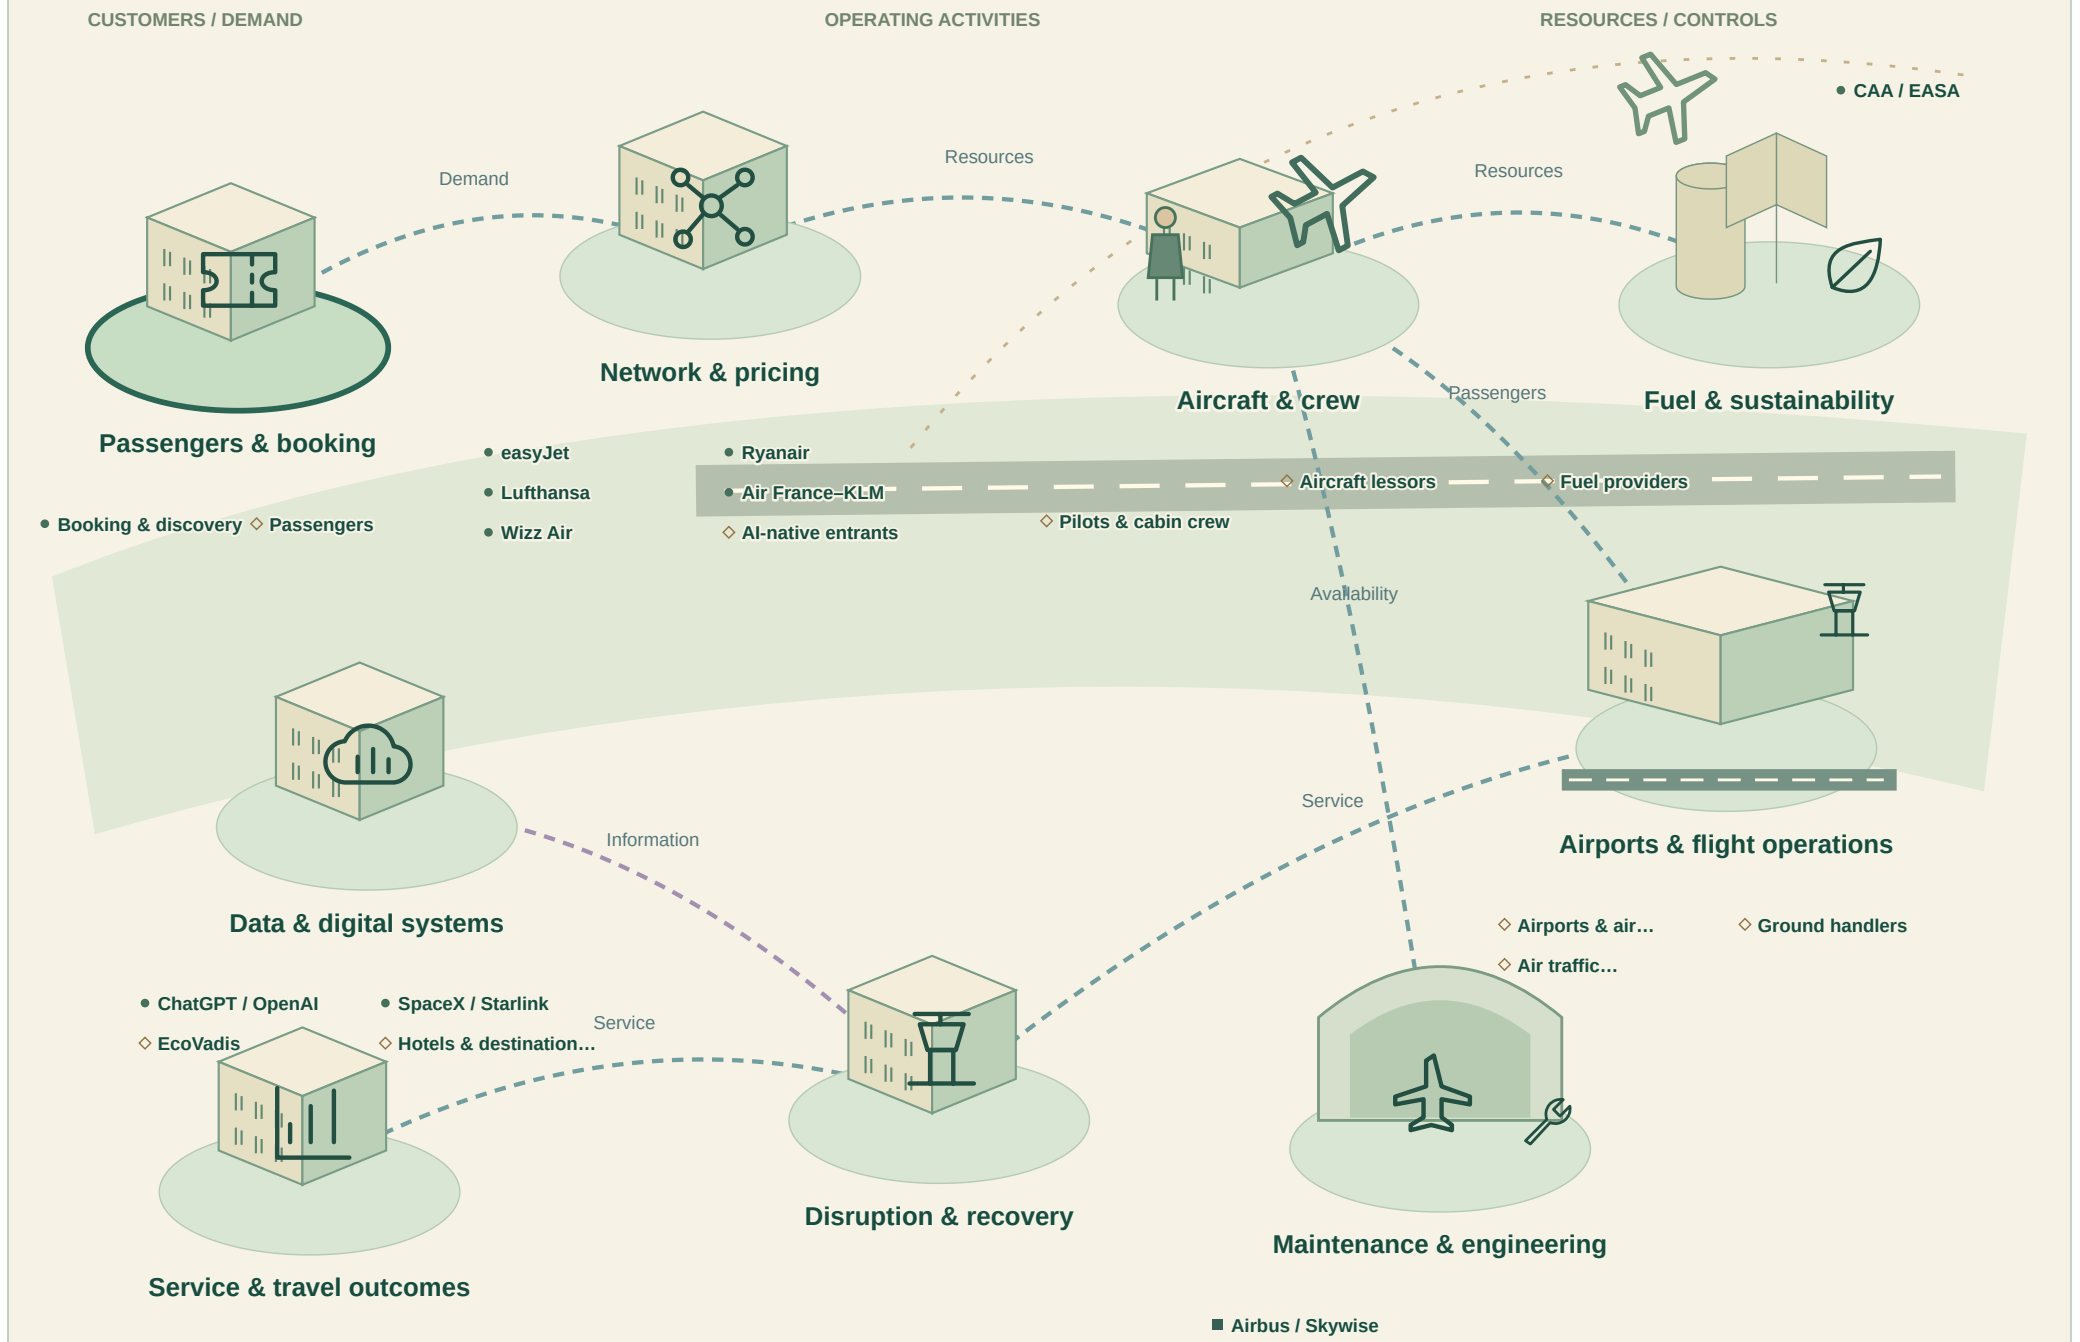

A passenger becomes a booking, a schedule, a flight — and a service outcome.

AIRPORT PASSENGER JOURNEYS

302

million passenger journeys
UK + Crown Dependency airports; not unique people
Calendar 2025; UK and Crown Dependency airports

Inspect measurement & source →

Dashed arrows = conceptual flows. Locations = roles. Labels = equal-weight navigation, not market rank.

Dashed → conceptual money / passenger / service flow ◇ Unknown provider / scope ■ Dated reference-company relationship — inspect period

Rust outline: challenged finding Plum: AI scenario Amber: regulatory exposure to investigate

Activity/illustration areas show distinct business roles, not measured importance. Participant labels use equal typography; there is no quantitative ranking. Comparable current airline shares, industry employment and GVA remain unverified; airport journeys are not unique people.

Print includes all contextual panels; source dates and conceptual/unknown status are retained.

▼ Passengers & booking

Conceptual industry structure

Connect customer needs to routes, prices and bookings. Current conversational discovery returns users to easyJet booking sites.

> Industry-standard explanatory model, not a verified organisation, system or contractual map. Reference-company disclosures illustrate their own entity and period only; they do not prove sector-wide adoption.

Role, dependencies & participants

Booking & discovery → **Passengers →**

Conceptual flows

Bookings inform network and pricing decisions

Capabilities & programmes

Customer & digital channels **Holiday partner orchestration**

Conversational commerce

Cost, risk & transformation

Capacity, aircraft availability, fuel and service recovery affect operating economics; no cost share or causal benefit is estimated.

Analytical scenario — not a proven threat Conversational discovery may change distribution economics. Current ChatGPT discovery is evidence, not proof of disintermediation or a competing airline.

Structural defences: Brand, network, booking and fulfilment remain relevant; relative advantage and customer migration are unverified.

▼ Aircraft & crew

Conceptual industry structure

Prepare and allocate aircraft and people for the schedule; enabling tools are not proof of utilisation or causal benefits.

> Industry-standard explanatory model, not a verified organisation, system or contractual map. Reference-company disclosures illustrate their own entity and period only; they do not prove sector-wide adoption.

Role, dependencies & participants

CAA / EASA → | Aircraft lessors → | Pilots & cabin crew →

Conceptual flows

- Schedules require aircraft and crew capacity
- Fleet and crew support flights through airports
- Maintenance supports aircraft availability
- Fuel and sustainability requirements constrain operations

Capabilities & programmes

- Flight & crew operations
- Fleet & maintenance
- Operational AI & disruption workflows
- Fleet transition & maintenance integration

Cost, risk & transformation

Capacity, aircraft availability, fuel and service recovery affect operating economics; no cost share or causal benefit is estimated.

Analytical scenario — not a proven threat Predictive and generative tools may change operational economics. Separate aggregate performance from causal AI contribution.

Structural defences: Existing ICC, maintenance and crew capabilities are not a greenfield opportunity; residual problems need validation.

No verified causal or contractual claim follows from this arrow. Inspect endpoint research for source-specific facts and remaining gaps.

▼ Operational disruption can require recovery

Conceptual industry flow; not verified enterprise topology

Operational disruption can require recovery

> Conceptual explanatory flow; no enterprise-specific topology or contract is asserted.

Airports & flight operations **Disruption & recovery**

No verified causal or contractual claim follows from this arrow. Inspect endpoint research for source-specific facts and remaining gaps.

▼ Maintenance supports aircraft availability

Conceptual industry flow; not verified enterprise topology

Maintenance supports aircraft availability

> Conceptual explanatory flow; no enterprise-specific topology or contract is asserted.

Maintenance & engineering **Aircraft & crew**

No verified causal or contractual claim follows from this arrow. Inspect endpoint research for source-specific facts and remaining gaps.

▼ Fuel and sustainability requirements constrain operations

Conceptual industry flow; not verified enterprise topology

Fuel and sustainability requirements constrain operations

> Conceptual explanatory flow; no enterprise-specific topology or contract is asserted.

Fuel & sustainability **Aircraft & crew**

No verified causal or contractual claim follows from this arrow. Inspect endpoint research for source-specific facts and remaining gaps.

▼ Operational data can support recovery decisions

Conceptual industry flow; not verified enterprise topology

Operational data can support recovery decisions

> Conceptual explanatory flow; no enterprise-specific topology or contract is asserted.

Data & digital systems **Disruption & recovery**

No verified causal or contractual claim follows from this arrow. Inspect endpoint research for source-specific facts and remaining gaps.

▼ Recovery shapes the customer journey

Conceptual industry flow; not verified enterprise topology

Recovery shapes the customer journey

> Conceptual explanatory flow; no enterprise-specific topology or contract is asserted.

Disruption & recovery **Service & travel outcomes**

No verified causal or contractual claim follows from this arrow. Inspect endpoint research for source-specific facts and remaining gaps.

Key findings

Supported disclosures · retain their reporting periods

source-supported disclosure

IATA forecasts global 2026 airline revenue of USD1.165trn, net profit USD23bn and 2.0% net margin; these are June forecasts, not actuals.

2026 global forecast; not actual results

Evidence, date & scope →

source-supported disclosure

CAA records 302m passenger journeys through UK and Crown Dependency airports in 2025; journeys are not unique travellers or easyJet passengers.

Calendar 2025; UK and Crown Dependency airports

Evidence, date & scope →

source-supported disclosure

UK policy raises SAF share from 2% in 2025 to 10% in 2030 and 22% in 2040. Obligations attach to qualifying fuel suppliers, not automatically every airline.

Policy trajectory from 2025; page updated 13 July 2026

Evidence, date & scope →

Analyst interpretation · conceptual frameworks, not verified enterprise ownership or buying demand.

▼ Existing PESTLE diagram

PESTLE / six external forces

Interpretive assessment linked to evidence, capabilities and commercial questions.

Political · Economic · Social · Technological · Legal · Environmental

Research assessment updated 2026-11-09. Source periods differ. Analytical presentation; inspect node and relationship status. Explore commercial hypotheses →

▼ **Interpretation, affected capabilities & evidence**

Political

Airspace access and geopolitical shocks constrain networks; a geopolitical driver is not an enterprise procurement.

Follow capabilities, evidence & opportunities →

Economic

Thin forecast margins amplify fuel exposure and utilisation trade-offs. Market size is not addressable IT spend.

Follow capabilities, evidence & opportunities →

Social

High travel volumes coexist with service and accessibility expectations; do not assume willingness to pay for AI.

Follow capabilities, evidence & opportunities →

Technological

Existing operational AI and conversational distribution suggest integration and outcome questions rather than greenfield platforms.

Follow capabilities, evidence & opportunities →

Legal

Safety assurance and flight-specific passenger rights constrain automation and disruption workflows.

Follow capabilities, evidence & opportunities →

Environmental

Fuel mandates create chain-of-custody and assurance interfaces; fuel suppliers and airline responsibilities differ.

Follow capabilities, evidence & opportunities →

Commercial implications

Research priority 1 / Unqualified

Operational AI workflow delivery and benefit assurance

Disconnected exception handling could limit the value of existing AI; current

Research priority 2 / Unqualified

Conversational channel integration and conversion assurance

Research priority 3 / Unqualified

Holiday partner and customer journey orchestration

Partner scale can create servicing and fulfilment complexity; no measured

failure modes are unknown.

Relevance 3/3 · Access 1/3 · Evidence 2/3 · Seller fit 3/3

Next: Ask the operations sponsor for one current exception backlog and measured baseline; test whether external integration capacity is wanted.

Inspect proposition & evidence →

A new search channel needs reliable booking handover; incremental conversion and pain are unmeasured.

Relevance 3/3 · Access 1/3 · Evidence 2/3 · Seller fit 3/3

Next: Request channel funnel and handoff-error data from the product owner; offer a bounded diagnostic only if an unresolved problem exists.

Inspect proposition & evidence →

easyJet gap established.

Relevance 3/3 · Access 1/3 · Evidence 1/3 · Seller fit 3/3

Next: Reverify original November statement, then validate a concrete partner exception and sponsor before proposing a work package.

Inspect proposition & evidence →

Assessment 2026-11-09. Source dates and reporting periods differ. Public disclosures support research, not customer demand.

2 official search-index excerpts only; original documents not directly verified. Improving the package holiday; FY2026 third-quarter trading update, indexed official excerpt.

1 source citations still require primary verification. See source register and research gaps.

▼ Evidence, historical observations & research gaps (5 claims)

Observation period and publication date remain distinct. Historical and superseded intelligence is preserved; inferred relationships never become verified facts.
